### North International Corporate Social Responsibility Program (CSR Program)

Our company believes in sustainable eco business . All our efforts are oriented to achieve a low environmental impact without reducing the level of service, reliability and accuracy.

North International begins the CSR program in the office.

In the head quarter we use recycled paper and the policy is minimizing printing documents.

We proceed with the collection of all the inner material: paper, plastic, glass, coffee capsules and all the material that can have a second life.

We dont use any product that could damage the nature in the office cleaning.

For our business following our rules for the Corporate Social Responsibility Program

- For our services we use any type of boxes in recycled paper, no plastic are involved no other material that can't be reused.
- We not exceed the number of labels or other materials, we use only what you need.
- We optimize the delivery studying accurately size and weight to reduce the volume and all the materials involved.
- We pay attention to minimizing the distances as not to impact on a more general management of the use of fuels of any type in the transport.
- We do the same for internal moving choosing low impact environmental vehicles.

This enables North International to reduce the waste and minimizing impact on the environment and improve the sustainability of our work.
